

For Project 1, you will be creating a 2D game in Godot. You are welcome to design any game you would like, provided it fits the given theme. I do expect a full prototype of your game, one that has gone through multiple revisions to improve the game. Ideally, it should be a “vertical slice” that you would show at a job interview or to funders. For this project, that means at least two levels, one to teach the concepts, one to apply them. While you should have the player use the concepts when taught, you need to make sure you have the player use the concepts you taught in unique ways in the later level(s). Animations for the characters where appropriate and sound effects/audio is optional, but recommended.

I am also looking for a Game Design Document (though not a formal one) with details about your game. You need to include as much detail as possible based on your design and process for the game’s development. Some things I will be specifically looking for: What You Are Learning/What is the Game Teaching, Genre, Rules, Core Mechanics, Concept of Your Game, and any Background Information (things I would need to play or story information not in the game itself). This is not comprehensive, but should be included (it is possible your game will require more than just these to get full points). You will need to have iterations of your game, showing playtesting, on Github. You should include a description of the changes you made and why in your Game Design Document.

You must host your code and your release on Github. On Blackboard, I will need you to submit your report and a link to the repo. Your Github repo must be public, so your peers can do peer review of your project. Ideally, please add me as a collaborator so I can grade your project more easily. My Github account is: cwwalterOleMiss

You must have a build of your final game as a release on Github for the following platforms:

- Windows (x86) (ARM optional, not required)
- Mac
- Linux (x86) (ARM optional, not required)

For Graduate Students: You must explicitly define your design schemas and how your final design connects to those schemas, based on the schemas we discussed in “Rules of Play.” You must also include one additional level for your final game. Your characters must have some animations and you must include audio for events that should have audio (item pickups, attacks, damage, etc.).

The theme for Project 1 is: **Underwater**

Grading:

	5	4	3	2	1	0
Game is Playable on My Hardware	Yes, with provided release	Yes, if I compile myself, but no other modifications	Yes, but only with changes I have to make	Yes, but only after I have to reach out	Yes, but only on your hardware	No
Game is 2D and Created in Godot	Yes				2d, not Godot	No
Game Levels Show Progression in Learning	Learn in one level, utilize in the next for all abilities	Learn most abilities in one level, utilize them in the next	Learn abilities and utilize them in the same level	Some abilities not taught, but those that are taught are utilized in the next level	No abilities taught, but they exist	No learning
Game is Substantial	Game takes 5-10 minutes to play through, with no noticeable filler	Game takes 1-5 minutes to play through, with no noticeable filler	Game takes 5-10 minutes to play through with noticeable filler	Game takes 1-5 minutes to play through with noticeable filler	Game takes less than 1 minute to play through	No game to play
Game is Fun to Play	Yes		No			Game is not a game
Description of what the game is teaching	Detailed and accurate	Detailed, mostly accurate, but at least 1 error	Accurate, but only with interpretation	Inaccurate, but I can argue I see where you are coming from	Inaccurate	Non-existent
Description of core mechanics and how to play	Understandable without additional questions	Understandable, but I am making assumptions	Understandable after talking with you	Makes little sense	Makes no sense	Non-existent
Defined Rules	Rules are defined, mostly complete, and are detailed and understandable	Rules are defined but are missing minor, obvious rules	Rules are defined but are missing major rules	Rules are defined, but barely	Rules defined are not present in game	None defined
Game Concept/ Genre and Background Described	Concept and Genre are described and implemented; detailed background information	Concept and Genre are described and implemented; limited background information	Concept or Genre is described, but not implemented as described	Background information, but no Concept/ Genre or Concept/ Genre but no Background	Neither described nor implemented	None
Description of what changed between iterations	Description of changes and git pushes match	Git history shows iterations but only some are described in documents	Git history shows iterations but none described	No Git history, but changes are described	No Git history, changes are not described, but there is a section for this	None
